

Effect-size control: parallel fold-change response vs. magnitude-matched null

Shared DAPs $n = 126$, Background $n = 1557$, 10,000 permutations each

Null mean = 0.002 $\pm$ 0.056

A. Naive shuffle
P < 1e-04

Null mean = 0.224 $\pm$ 0.031

B. |log2FC|-stratified shuffle
P < 1e-04
